

ROBOT 557

User-friendly with reach and flexibility

The track-driven and fully automated Robot 557 is available in a horizontal, standard or XL versions. The standard and XL models are equipped with an MPA (Multi-Purpose Arm) that allows you to easily adjust and position the cutting head with the help of the remote control. Together with the adjustable chassis and track extension, the robot is versatile and compact with unique reach and stability. The Robot 557 is also equipped with a sliding main body to adjust the robot's center of gravity to ensure stability during overhead operation. All versions of the Conjet ACR™ Robot 557 are available with a diesel or electric engine.

The horizontal version of the Robot 557 is optimal for fast and easy concrete removal on parking decks, bridges and other horizontal areas, while the standard or XL version are preferred for wall and over-head tasks. The standard and XL versions can also be used for larger horizontal applications.

As with all Conjet ACR™ robots, the Robot 557 is fully compatible with the Conjet ONE system.
